### consulting & training services

EBME Ltd utilises highly developed systems for managing and maintaining medical devices, providing ongoing asset management, technical consultancy, cost control, cost reduction and performance management.

The focus of the company is to assist the healthcare sector in the proactive pursuit of an ongoing equipment management strategy, linking it to the National Audit Office recommendations and the standards required by clinical governance and to Department of Health guidance.

### Who are we?

The service centre facility in Harlow is set up to provide state of the art medical equipment calibration and maintenance. We also have regional facilities based at various Hospital sites providing on-site EBME services.

Our staff are our strength, we have a diversified team of experienced biomedical engineers, project management consultants, nurse-trainers, and support staff able to deliver the quality services you require.

### Our services

EBME Ltd can provide comprehensive medical equipment management and maintenance services tailored to the precise needs of the organisation.

We will assist the hospital or health care practice to maintain and manage their medical equipment asset base to the standards laid down in MDA DB 9801 (January 1998) – Management of Medical Equipment for Hospital and Community Use and BS5724/IEC601 – Safety of Medical Electrical Equipment. We also provide:

- Fully comprehensive in-house medical devices maintenance services which play a vital role in meeting hospitals' cost savings targets.
- Independent effective advice on medical device procurement strategy, setting up the framework for medical device user group meetings, advising on DB9801 and national standards for medical devices.
- Independent contracts management to ensure best value for money. We aim to provide an independent technical assessment based on an identified need.
- Independent effective pre-purchase equipment appraisal with life costs.
- Management and training of technical staff ensuring awareness of current standards and practices.
- Medical device specialists with detailed knowledge of International, European, and UK statutory requirements and recommendations.
- Consultancy services to include technical activities, change management, cost reduction, control and management.

### CNST policy review & equipment training

EBME Ltd can review CNST requirements and assist in producing the Trusts policy in the area of medical equipment management and training. The review is tailored to Trusts specific needs and will assist the organisation in meeting CNST accreditation levels.

With our dedicated training personnel we can provide a medical equipment user training programme specifically aimed at CNST requirements and continuous professional development. We can train your personnel to a level of competence that will promote ongoing in-house training. We are also able to offer audit services.

### Cost management systems

EBME Ltd has a proven track record in providing a wide range of innovative services which deliver the highest quality, efficiency, safety and cost benefits to hospitals.

We are currently involved in projects across multi-hospital sites and will assist in identifying and delivering millions of pounds of non-pay cost savings. Using our experience we are able to set out clear cost reduction targets that have wider clinical benefits, for example, as a result of standardisation and improved training.
